

LESSON PLAN	COURSE: MDM4U
Date:	Unit of Study: Unit 1
Materials/Resources: Mathmatics of data management study guide	Lesson Focus/Theme: Chapter 6: Introduction to Probability
Prior Knowledge: Permutation and combination	
Overall Expectations: By the end of this lesson, students will: Demonstrate an understanding of discrete probability distributions, represent them numerically, graphically, and algebraically, determine expected values, and solve related problems from a variety of applications;	
Specific Expectations: 1.1 recognize and identify a discrete random variable X (i.e., a variable that assumes a unique value for each outcome of a discrete sample space, such as the value x for the outcome of getting x heads in 10 tosses of a coin), generate a probability distribution [i.e., a function that maps each value x of a random variable X to a corresponding probability, $P(X = x)$] by calculating the probabilities associated with all values of a random variable, with and without technology, and represent a probability distribution numerically using a table 1.2 calculate the expected value for a given probability distribution [i.e., using $E(X) = \sum xP(X = x)$], interpret the expected value in applications, and make connections between the expected value and the weighted mean of the values of the discrete random variable 1.3 represent a probability distribution graphically using a probability histogram (i.e., a histogram on which each rectangle has a base of width 1, centred on the value of the discrete random variable, and a height equal to the probability associated with the value of the random variable), and make connections between the frequency histogram and the probability histogram (e.g., by comparing their shapes)	

Learning Goals:

By the end of this lesson, students will know basic probability, odds, probability using counting techniques

Success Criteria:

By the end of this lesson, I will be able to know the basic probability

By the end of this lesson, I will be able to know the odds

By the end of this lesson, I will be able to know the probability using counting techniques

Assessment Strategies: Tests, quiz and project**Time:**
10 min**Introduction/Minds-On:**

Answer questions students don't understand from last class if any

Time:**100 min****Lesson:**

Chapter 6: Introduction to Probabilities

6.1 Basic probability concepts

6.2 odds

6.3 Probabilities using counting techniques

Time:**10 min****Extension / Wrap-up:**

Review the key concepts and formula for this lesson

Notes / Reminders / Homework:

Do test #2 before or after the class in classroom for one hour

Lesson Reflection:
