

LESSON PLAN	COURSE: MDM4U
Date:	Unit of Study: Unit 1
Materials/Resources: Mathmatics of data management study guide	Lesson Focus/Theme: Chapter 6: Introduction to Probability
Prior Knowledge: Basic probability	
Overall Expectations: By the end of this lesson, students will: Demonstrate an understanding of discrete probability distributions, represent them numerically, graphically, and algebraically, determine expected values, and solve related problems from a variety of applications;	
Specific Expectations: 1.4 recognize conditions (e.g., independent trials) that give rise to a random variable that follows a binomial probability distribution, calculate the probability associated with each value of the random variable, represent the distribution numerically using a table and graphically using a probability histogram, and make connections to the algebraic representation $P(X = x) = (n \ x) p^x (1 - p)^{n - x}$ 1.5 recognize conditions (e.g., dependent trials) that give rise to a random variable that follows a hypergeometric probability distribution, calculate the probability associated with each value of the random variable (e.g., by using a tree diagram; by using combinations), and represent the distribution numerically using a table and graphically using a probability histogram 1.6 compare, with technology and using numeric and graphical representations, the probability distributions of discrete random variables (e.g., compare binomial distributions with the same probability of success for increasing numbers of trials; compare the shapes of a hypergeometric distribution and a binomial distribution) 1.7 solve problems involving probability distributions (e.g., uniform, binomial, hypergeometric), including problems arising from real-world applications	

Learning Goals:

By the end of this lesson, students will know the dependent and independent events and mutually exclusive events

Success Criteria:

By the end of this lesson, I will be able to know the dependent event and independent event

By the end of this lesson, I will be able to know the mutually event

Assessment Strategies: Tests, quiz and project

Time:
10 min

Introduction/Minds-On:

Answer questions students don't understand from last class if any

Time:

100 min

Lesson:

Chapter 6: Introduction to probability

6.4 Dependent and independent events

6.5 Mutually exclusive events

Time:

10 min

Extension / Wrap-up:

Review the key concepts and formula for this lesson

Notes / Reminders / Homework:

Give the final project to student to do

Lesson Reflection:
