

LESSON PLAN	COURSE: MDM4U
Date:	Unit of Study: Unit 4
Materials/Resources: Mathmetics of data management study guide	Lesson Focus/Theme: Chapter 8: The Normal Distribution
Prior Knowledge: Probability	
Overall Expectations: By the end of this lesson, students will: demonstrate an understanding of the role of data in statistical studies and the variability inherent in data, and distinguish different types of data;	
Specific Expectations: 1.1 recognize and describe the role of data in statistical studies (e.g., the use of statistical techniques to extract or mine knowledge of relationships from data), describe examples of applications of statistical studies (e.g., in medical research, political decision making, market research), and recognize that conclusions drawn from statistical studies of the same relationship may differ (e.g., conclusions about the effect of increasing jail sentences on crime rates) 1.2 recognize and explain reasons why variability is inherent in data (e.g., arising from limited accuracy in measurement or from variations in the conditions of an experiment; arising from differences in samples in a survey), and distinguish between situations that involve one variable and situations that involve more than one variable 1.3 distinguish different types of statistical data (i.e., discrete from continuous, qualitative from quantitative, categorical from numerical, nominal from ordinal, primary from secondary, experimental from observational, microdata from aggregate data) and give examples	

Learning Goals:

By the end of this lesson, students will know the continuous probability distribution, properties of normal distribution and normal sampling and modelling

Success Criteria:

By the end of this lesson, I will be able to know the continuous probability distribution

By the end of this lesson, I will be able to know the properties of normal distribution

By the end of this lesson, I will be able to know the normal sampling and modelling

Assessment Strategies: Tests, quiz and project

Time:
10 min

Introduction/Minds-On:

Answer questions students don't understand from last class if any

Time:
80 min

Lesson:

Chapter 8: The Normal Distribution

8.1 Continuous Probability distribution

8.2 Properties of normal distribution

8.3 Normal sampling and modelling

Time:

Extension / Wrap-up:

10 min

Review the key concepts and formula for this lesson

20 min

Do quiz #4

Notes / Reminders / Homework:

Review for the test and finish the project

Lesson Reflection:
