

LESSON PLAN	COURSE: MDM4U
Date:	Unit of Study: Unit 1
Materials/Resources: Mathmetics of data management study guide	Lesson Focus/Theme: Chapter 2 : Statistics of one variables
Prior Knowledge: Data analysis with graphs	
Overall Expectations: By the end of this lesson, students will: analyse, interpret, and draw conclusions from one-variable data using numerical and graphical summaries	
Specific Expectations: 1.4 interpret, for a normally distributed population, the meaning of a statistic qualified by a statement describing the margin of error and the confidence level (e.g., the meaning of a statistic that is accurate to within 3 percentage points, 19 times out of 20), and make connections, through investigation using technology (e.g., dynamic statistical software), between the sample size, the margin of error, and the confidence level (e.g., larger sample sizes create higher confidence levels for a given margin of error) 1.5 interpret statistical summaries (e.g., graphical, numerical) to describe the characteristics of a one-variable data set and to compare two related one-variable data sets (e.g., compare the lengths of different species of trout; compare annual incomes in Canada and in a third-world country; compare Aboriginal and non-Aboriginal incomes); describe how statistical summaries (e.g., graphs, measures of central tendency) can be used to misrepresent one-variable data; and make inferences, and make and justify conclusions, from statistical summaries of one-variable data orally and in writing, using convincing arguments	

Learning Goals:

By the end of this lesson, students will know concept of central tendency and spread

Success Criteria:

By the end of this lesson, I will be able to measure the central tendency

By the end of this lesson, I will be able to measure the spread

Assessment Strategies: Tests, quiz and project

Time:
10 min

Introduction/Minds-On:

Answer questions students don't understand from last class if any

Time:
100 min

Lesson:

Chapter 2: Statistic of One variable

2.4 Measure of Central Tendency

2.5 Measure of Spread

Time:

10 min

Extension / Wrap-up:

Review the key concepts and formula for this lesson

Notes / Reminders / Homework:

Review for quiz #1

Lesson Reflection:
